

Better grade RON95 to make debut

Fuel will be available at the pump from January

PUTRAJAYA: RON95 petrol that conforms with the Euro 4M (E4M) fuel standard will be introduced at petrol stations nationwide starting January.

Domestic Trade and Consumer Affairs Ministry secretary-general Datuk Muez Abd Aziz said E4M RON95, which is equivalent in quality with RON97, will replace the current the E2-standard petrol.

He said the E4M RON95 petrol reduces smoke production and provides for cleaner running engines, thus making it better for the environment.

"The E4M RON95 petrol is of higher quality and the consumers will be able to enjoy it starting next year," he said.

Muez said industry players were preparing to carry out the sale of the higher grade petrol where works at the depot and gas stations are ongoing.

Not many countries have the E4M-standard petrol, with Britain and Australia among the countries using it, he said.

Prior to this, Domestic Trade and Consumer Affairs Minister Datuk Seri Saifuddin Nasution Ismail reportedly said the introduction of the higher quality fuel was part of efforts to achieve the goals of the National Green Technology Policy 2009, which included reducing environmental pollution and improving public health. — Bernama
